

NPEXA-HM31S

single input, single output

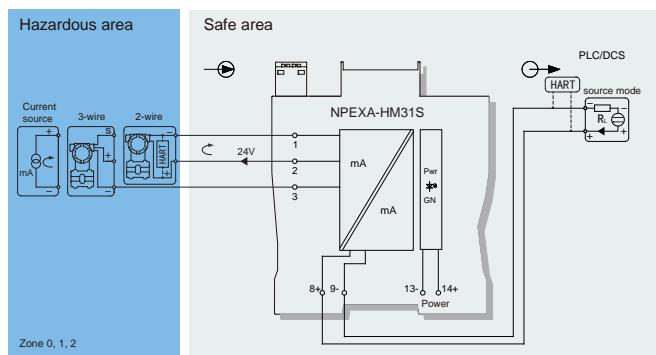

Input: 4 ~ 20 mA

Output: 4 ~ 20 mA (sink mode)

This isolated safety barrier detects loop current and converts it from a hazardous area into current (sink) signals to a safe area by isolation, and also provides transmitters with power in the hazardous area. It allows transmission of HART communication signals. The input, output, and power supply are galvanically isolated from each other.
